

YOUR MEETING ROOMS. SOLVED.

One Platform. Every Room.

Teatrx deploys Mago to eliminate friction, cost, and complexity across your meeting rooms. One solution covers every platform, every space, and every user.

CORE CAPABILITIES

Wireless Presentation

Walk into any room and present instantly from your laptop, tablet, or phone using AirPlay, Miracast, or Google Cast. No cables, no dongles, no driver installations, and no IT support calls required. Guests and staff connect the same way, every time.

Multi-Platform Video Conferencing

Run Microsoft Teams, Zoom, Webex, Google Meet, and more than 20 other conferencing platforms natively from the room system. Staff are never forced onto a single platform, and external guests join on their own preferred tool without compatibility issues.

Eliminate Redundant Platform Licences

One Mago licence replaces multiple per-room software subscriptions. Consolidate spend, remove vendor lock-in, and redirect savings back into your business. Teatrx manages the platform centrally so your IT team is not burdened with room-by-room licence tracking.

Interactive Whiteboard

Mago includes a full-featured digital whiteboard with real-time co-annotation, drawing tools, and instant file sharing. In-room and remote participants collaborate on the same canvas simultaneously, replacing physical whiteboards and separate whiteboard applications.

Incognito Mode & Credential Removal

When a meeting ends, Mago automatically erases all login credentials, browser sessions, and personal data from the room device. No accounts, no browsing history, and no cached files are ever left behind for the next user to access.

Central Server Management of Rooms

The Mago Admin Center gives Teatrx and your IT team full cloud-based control of every display and room system from a single secure dashboard. Push firmware updates, enforce security policies, and monitor room utilization across every floor and location in real time.
